Attn: Nathan E. Mathews,  
Plant Manager

FILE COPY

On December 5, 1990, the following hard copy documentation was requested: (1) The contents of tanks under your control; (2) The police and fire report on the boiler explosion which occurred on November 23, 1990; (3) Well monitoring analysis data; and (4) A diagram of your piping layout that distinguishes your lines from those used by Pacific Northern Oil Co. (PNOCO).

A review of the information obtained on December 5, 1990, indicates that additional documentation is necessary. Please provide the following within 10 working days of receiving this request: (1) Identify the specific chemicals and quantities used in your various waste oil treatment processes. If you report these in terms of annual quantities there should not be a conflict with proprietary information used in any particular process. (2) Provide the approximate number, volume and type of samples in the locked storeroom at the north end of the PNOCO shop area. That storeroom was about 100' northeast of the entrance to your Pier 91 office area and was the storeroom containing the 1989 Exxon samples which were photographed and discussed with you. (3) Provide any analytical data for these samples which existed prior to December 5, 1990. (4) Provide all analytical data for tank sediments removed and/or treated in the past 90 days by the ChemPro Long Beach operation.

If you need further information or have any questions regarding this request, I can be reached by calling (206) 553-7176, or writing to my attention at U.S. EPA, 1200 6th Ave. M/S ES-098, Seattle, WA 98101. Thank you for your cooperation in this matter.

Sincerely,

W. Douglas Smith,  
Senior Compliance Investigator
